Subject: The Chicago Superfund workplan

Hi Winna,

Per our communications today, it is our understanding that East Chicago plans on conducting soil excavation in support of construction work within the USS Lead Superfund Area. As we discussed on the phone, it is important that we discuss the attached work plan documents prior to doing any work of any kind within the USS Lead Superfund Area. Should the City do any soil related work within this area, including soil excavation, demolition, utility replacement or repair, or other construction the USEPA may consider the City responsible for cleanup work which could be financially problematic for East Chicago. We would like to hold conference call with you to discuss this in more detail. Fernando Trevino was our past contact with the City regarding this matter and he might be a good person, along with the Mayor and the City's attorney, to discuss this if you have work planned in the area.

The attached following reports were prepared specifically for the work conducted at 407-09 Vernon Avenue and 5018 Alexander Avenue. If the Consent Order is finalized, then future work within the USS Lead Superfund Area would have to be conducted in accordance with an updated site specific Workplan that is reviewed and approved by the USEPA.

- Revised Workplan dated August 12, 2010;
- Quality Assurance Project Plan dated July 2010; and
- Health and Safety Plan dated July 2010

Please let us know when East Chicago has time to talk about this matter.

Peter
